

Rhino Mag™ Magnetic Cable & Pipeline Marker

The Rhino Mag marker is designed to be buried directly above underground utilities such as plastic pipes and fiber optic cables. These colorful and high-strength permanent magnetic markers are easy to install and can be detected at depths up to 10 feet (3 m). The color-coded Rhino Mag is permanent and never needs to be recharged.

Easy Installation

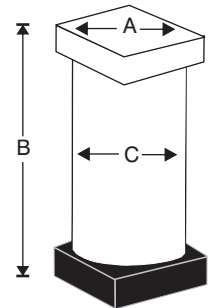

The Rhino Mag can be installed during new construction. To install simply place vertically in soil with BLACK END DOWN and backfill carefully to assure vertical orientation for maximum detection.

Locating

The Rhino Mag can be located by magnetic locators (not metal detectors). The location range depends on the type of locator used and the effective sensitivity of its sensors. The range can be up to 10 feet.

Colors

Available colors are: Yellow/Black, Red/Black, Blue/Black, Green/Black, Orange/Black

A= 1.4" (36 mm)
B= 2.5" (66 mm)
C= 1" (25 mm)
