

Rhino TriView® Sign

US Patent #6099203 & 7025016 & D525721 & pending patents

Rhino TriView Signs work great in situations when you cannot bury a sign, but need a highly visible marker that is 3D and has a message on all sides. The TriView Sign can be affixed to a fence, tree, building, or an existing wood sign in the vicinity of your utility or pedestal.

Temperature and Ultraviolet Light Stable

Made from RhinoPoly, the TriView Sign was specifically designed as an outdoor marker for buried cables and pipelines. This versatile sign has ultraviolet light stabilizers that will keep the bright color of the sign from fading in the sun. The TriView Sign is also temperature stable from -40 degrees Fahrenheit to +150 degrees.

Colors

Standard sign colors are yellow, white, orange, blue, green, red, purple and brown. Standard cap color is black. Optional cap colors are red, yellow, blue, orange and white. Custom colors are available for both signs and caps. Call for details.

Lengths

Standard sizes are 8", 18", 24" and 36".

Decals

TriView Signs can serve as pipeline markers that carry a warning message which may prevent an excavator from digging without calling for a locate. Our standard color fast decals use sharply contrasting colors and incorporate the international No-Dig symbol. This ensures that non-English speaking excavators will get the message! The 811 logo is also available on most standard decals. Use the 811 logo if you are a One-Call member in the United States.
